

Demonstration of Proposed Features

Date	1 July 2026
Team ID	
Project Name	Rising Waters
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document summarizes the implemented features of the Flood Prediction System and their completion status. It serves as evidence that the proposed functionalities were successfully developed and demonstrated.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Dataset Collection	Collected historical rainfall and flood datasets from Kaggle and other reliable sources for model training	Implemented	Yes	Successfully completed
2	Data Preprocessing	Cleaned missing values, removed duplicates, normalized data, and prepared features for training.	Implemented	Yes	Improved data quality
3	Machine Learning Model Training	Trained and evaluated Decision Tree, Random Forest, and K-Nearest Neighbors models for flood prediction.	Implemented	Yes	Best-performing model selected
4	Flood Prediction Engine	Predicts flood risk based on user-provided weather parameters using the trained machine learning model.	Implemented	Yes	Accurate prediction results generated
5	Flask Web Application	Developed a responsive web interface for accepting user inputs and displaying prediction results.	Implemented	Yes	User-friendly interface
6	Prediction Result Display	Displays Flood Risk / No Flood Risk prediction with clear output to the user.	Implemented	Yes	Successfully demonstrated

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100 %
