

Project Initialization and Planning Phase

Date	26 June 2026
Team ID	
Project Name	Rising Waters
Maximum Marks	3 Marks

Define Problem Statements (Rising Waters Problem Statement Template):

Create a problem statement to understand the customer's point of view in flood-prone areas. The Customer Problem Statement helps identify real challenges faced by people such as lack of early flood warnings, inaccurate predictions, and delayed emergency response. A well-defined problem statement helps in designing an effective machine learning-based flood prediction system. It also helps the team understand user needs and improve safety, decision-making, and disaster preparedness.

Example:

I am	I'm trying to	But	Because	Which makes me feel
a Meteorologist	predict flood risks early	Manual Processes are slow	weather data is too complex	Overwhelmed

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Disaster Management Coordinator	Predict likelihood of floods accurately and early.	Conventional forecasting methods fall short.	Lack of automated AI systems to analyze data.	Unprepared and frustrated.
PS-2	Resident in Flood-Prone Area	Stay safe and prepare for flooding.	I do not receive timely alerts.	Authorities lack reliable predictive systems.	Vulnerable and helpless.
