Empathy Map

An empathy map is used to understand users from four perspectives: Say, Think, Do, and Feel. It helps in identifying the needs and challenges of users affected by floods. For the **Rising Waters** project, it focuses on people in flood-prone areas and their safety concerns. This helps in designing a machine learning-based flood prediction system that provides timely alerts and improves disaster response.

SAYS • "I want early flood alerts before it's too late." • "I don't trust flood predictions because they are often wrong." • "I need clear and timely information about flood risks." • "I want to protect my family and my home."	THINKS • Will the water level rise further? • Why are flood predictions not accurate? • When will I get the next alert? • Which areas are at high risk? • How can I keep my family safe and prepare in time?
PERSONA NAME <i>(Role / User Type)</i> Residents in Flood-Prone Areas	
DOES • Checks flood alerts and weather updates on the app/website. • Monitors water levels and rainfall information. • Follows alerts and instructions from authorities. • Prepares emergency kit and moves to safe places when needed. • Shares alerts and information with family and neighbors.	FEELS • Anxious about unexpected floods and safety. • Frustrated with delayed or inaccurate alerts. • Worried about loss of life, property and livelihoods. • Relieved when getting accurate and early warnings. • Hopeful that technology can help keep the community safe.
